

Appln. No. 10/706,202
Amdt. Dated November 29, 2005
Reply to Office Action of July 29, 2005

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (previously presented) The method of claim 6, wherein the hydrothermally stable modified alumina support comprises a transition alumina and at least one modifying agent comprising said element from the Periodic Table with an atomic volume between about 6 and about 14 cm³/mol, and further wherein the depositing step (B) comprises depositing a precursor of the at least one modifying agent onto the transition alumina.
2. (previously presented) The method of claim 1, wherein the atomic volume of the element is between about 9 and about 11 cm³/mol.
3. (previously presented) The method of claim 1, wherein the transition alumina comprises gamma-alumina.
4. (previously presented) The method of claim 1, wherein the element is aluminum.
5. (previously presented) The method of claim 4, wherein the at least one modifying agent comprises the form of a hydroxide, an ion, or mixtures thereof.
6. (previously presented) A method for producing hydrocarbons, comprising:
providing a reactor having a catalyst comprising a hydrothermally stable modified alumina support;
contacting a reactant gas comprising carbon monoxide and hydrogen with the catalyst to produce the hydrocarbons; and
wherein the hydrothermally stable modified alumina support is made by a process comprising:
(A) providing an alumina precursor;

Appln. No. 10/706,202
Amdt. Dated November 29, 2005
Reply to Office Action of July 29, 2005

(B) depositing a modifying agent comprising an element from the Periodic Table with an atomic volume between about 6 and about $14 \text{ cm}^3/\text{mol}$ onto the alumina precursor; and

(C) calcining the alumina precursor to form the hydrothermally stable modified alumina support.

7. (original) The method of claim 6, wherein the alumina precursor of step (A) comprises one or more transition alumina phases.
8. (original) The method of claim 7, wherein the alumina precursor of step (A) comprises one or more transition phases selected from gamma, delta, kappa, eta, chi, rho, and theta.
9. (original) The method of claim 6, wherein step (A) further comprises pre-treating the alumina precursor.
10. (original) The method of claim 9, wherein pre-treating comprises spray drying, dehydrating, drying, steaming, or calcining.
11. (original) The method of claim 6, wherein step (A) further comprises dispersing the alumina precursor in a solvent to form a sol.
12. (original) The method of claim 11, wherein depositing the modifying agent onto the alumina precursor of step (B) further comprises depositing the modifying agent onto the sol.
13. (original) The method of claim 12, wherein the sol is spray dried after depositing the modifying agent onto the sol.
14. (original) The method of claim 6, wherein step (B) is accomplished by spray-drying, impregnation, co-precipitation, or chemical vapor deposition, or plasma sputtering.
15. (original) The method of claim 14, wherein impregnation comprises incipient wetness impregnation.
16. (original) The method of claim 6, wherein the modifying agent of step (B) comprises aluminum.

Reply to Office Action of July 29, 2005

17. (original) The method of claim 6, wherein the modifying agent of step (B) comprises an aluminum salt, dispersible boehmite, dispersible pseudo-boehmite, or mixtures thereof.
18. (original) The method of claim 17, wherein step (C) is accomplished at temperatures from about 250 °C to about 900 °C.
19. (original) The method of claim 6, wherein step (B) further comprises depositing at least one additional modifying agent onto the alumina precursor.
20. (original) The method of claim 6, wherein step (C) is accomplished at temperatures between 500 and 900 °C.
21. (original) The method of claim 20, wherein the atomic volume of the element is between about 8 and about 12 cm³/mol.
22. (original) The method of claim 21, wherein the atomic volume of the element is between about 9 and about 11 cm³/mol.
23. (original) The method of claim 6, wherein the hydrothermally stable alumina support comprises an oxide of the element, and wherein the element oxide has a molecular volume lower than that of aluminum oxide.
24. (original) The method of claim 23, wherein the element oxide has a molecular volume between about 10 and about 25.7 cm³/mol.
25. (original) The method of claim 6, wherein the alumina precursor comprises gamma-alumina.
26. (original) The method of claim 6, wherein step (B) is accomplished by impregnation.
27. (original) The method of claim 6, wherein step (C) is accomplished at temperatures between about 800°C and about 900°C.
28. (cancelled)

Appln. No. 10/706,202

 Reply to Office Action of July 29, 2005

29. (currently amended) The method of claim 35, wherein the aluminum-modified alumina support is made by a method comprising impregnating ~~a precursor of the at least one modifying agent comprising aluminum~~ the modifying agent precursor to an alumina precursor.
30. (currently amended) The method of claim 29, wherein ~~the precursor of the at least one modifying agent comprising aluminum comprises an aluminum ion, a hydroxide of aluminum, or combinations thereof~~ the aluminum hydroxide comprises boehmite, pseudo-boehmite, gibbsite, or mixtures thereof.
31. (currently amended) The method of claim 29, wherein ~~the precursor of the at least one modifying agent comprising aluminum~~ the aluminum salt comprises aluminum nitrate, aluminum lactate, aluminum acetate, or combinations thereof.
32. (currently amended) The method of claim ~~29~~35, wherein the alumina precursor comprises a transition alumina.
33. (currently amended) The method of claim ~~29~~35, wherein the alumina precursor comprises gamma-alumina.
34. (previously presented) The method of claim 42, wherein the catalytically active metal comprises cobalt.
35. (currently amended) A method for producing hydrocarbons, comprising:
 - (A) providing a reactor having a catalyst comprising an aluminum-modified alumina support; and
 - (B) contacting a reactant gas comprising carbon monoxide and hydrogen with the catalyst to produce the hydrocarbons,
wherein the aluminum-modified alumina support is modified by at least one modifying agent comprising aluminum by applying a modifying agent precursor comprising an aluminum salt, an aluminum hydroxide, or mixtures thereof, to an alumina precursor.

Appln. No. 10/706,202
Amdt. Dated November 29, 2005
Reply to Office Action of July 29, 2005

36. (original) The method of claim 35, wherein the hydrocarbons comprise primarily at least 9 carbons.
37. (canceled) ~~The method of claim 35, wherein the aluminum-modified alumina support of step (A) comprises an alumina support modified by at least one modifying agent comprising aluminum.~~
38. (currently amended) The method of claim ~~37~~ 35, wherein the ~~alumina support is modified by at least one modifying agent comprising aluminum by applying a modifying agent precursor comprising~~ comprises dispersible boehmite, dispersible pseudo-boehmite, or mixtures thereof.
39. (currently amended) The method of claim ~~37~~ 35, wherein the alumina support is further modified by at least one additional modifying agent.
40. (original) The method of claim 35, wherein the catalyst comprises at least one promoter selected from the group consisting of platinum, palladium, ruthenium, rhenium, silver, boron, copper, lithium, sodium, potassium, magnesium, and combinations thereof.
41. (previously presented) The method of claim 35, wherein the catalyst of step (A) comprise a catalytically active metal comprising at least one metal selected from the group consisting of Group 8 metals, Group 9 metals, Group 10 metals, molybdenum, rhenium, and tungsten.
42. (previously presented) The method of claim 35, wherein the catalyst of step (A) comprises a catalytically active metal comprising at least one metal selected from the group consisting of cobalt, ruthenium, iron, nickel, and combinations thereof.
43. (previously presented) The method of claim 35, wherein the reactant gas of step (B) contains hydrogen and carbon monoxide in a molar ratio of from about 0.67:1 to about 2.5:1.
44. (currently amended) The method of claim ~~38~~ 35, wherein the aluminum salt is selected from the group consisting of aluminum carbonate, aluminum acetate, aluminum acetyl acetate, aluminum lactate, aluminum nitrate, aluminum chloride, aluminum oxalate, and mixtures thereof.
